Medina, OH - November 17, 2006 - TwinCrest Group announced today it launched the multi-specialty version of *POL Path*, a unique, physician in-office laboratory (POL) information management and pathology reporting system.

Pat Kalish, TwinCrest's Executive VP of Corporate Communications commented, "We have expanded our current exciting relationship with The Jambor Group to sell and distribute *POL Path* pathology reporting and information management software to multi-specialty group practices. There was no commercial system for the burgeoning physician in-office pathology laboratory (POL) market prior to *POL Path*.

Pat continued, "Our in-office pathology laboratory clients will benefit from *POL Path's* many features. Its drop-down menus eliminate the need for any pathologist dictation, leading to reduced turnaround time and clerical errors. This yields large cost savings. The system is very easy to use, eliminating a need for paper requisitions. Experienced pathologists helped design the system with an eye to assuring that it is very reasonably priced. This is another critical building block supporting our single-source approach for design, implementation and continued operational and regulatory compliance for TwinCrest clients and their in-office pathology laboratories."

Rich Jambor commented, "Most commercial pathology reporting systems are designed for larger independent and hospital-based pathology laboratories and are expensive. Our system costs one-third of commercial systems but contains all the features and benefits to operate a compliant and profitable in-office pathology laboratory. Any multi-specialty practice with their own pathology laboratory will see the benefits of *POL Path*. TwinCrest's clients will have distributive data input, color reporting option, customized diagnostic templates, digital requisitions specific for each specialty, information management and billing capability at the click of a mouse. TwinCrest in-office pathology laboratories will practice at a community standard of patient care, plus be very productive. *POL Path* is adaptable to an EMR system at an additional cost."

The Jambor Group, Perrysburg, OH is a private database development organization. They developed *POL Path* to meet TwinCrest's rapidly expanding growth in providing in-office pathology laboratories to specialty practices.

The TwinCrest Group is headquartered in Medina, OH. For more information or to arrange for a demonstration, call 800-280-3785, email to twincrest@BEX.net or visit www.twincrestgroup.com and go to the *POL Path* page.
